

CyberMAP 2.0 — Endpoint Security Scan Report

Host: LAB-PC-01 | OS: Windows-10-10.0.26200-SP0 | Scan Time: 2026-08-28T12:59:05.066553

Scan Summary

Total Checks	Passed	Partial	Failed	Errors
6	4	0	2	0

Detailed Check Results

Firewall Status — PASS PR.PS-05 / ISO 8.22

Checks whether the Windows Firewall is enabled on all three network profiles (Domain, Private, Public). A disabled firewall on any profile allows unfiltered network traffic to reach the machine, increasing exposure to network-based attacks.

Raw command output:

```
Domain Profile Settings:
-----
State ON

Private Profile Settings:
-----
State ON

Public Profile Settings:
-----
State ON
Ok.
```

Antivirus / EDR Status — PASS PR.PS-04 / ISO 8.7

Checks whether an antivirus or endpoint detection product is registered and active with Windows Security Center. Without active endpoint protection, malware and known threats are not automatically detected or blocked.

Raw command output:

```
Windows Defender
```

Password Policy — FAIL PR.AA-05 / ISO 8.2

Reads the system's minimum password length requirement. A minimum length of 0 or below 8 characters means weak, easily guessed or brute-forced passwords are permitted, significantly increasing the risk of unauthorised account access.

Raw command output:

```
Minimum password length detected: 0 characters

Force user logoff how long after time expires?: Never
Minimum password age (days): 0
Maximum password age (days): 42
Minimum password length: 0
Length of password history maintained: None
Lockout threshold: Never
Lockout duration (minutes): 30
Lockout observation window (minutes): 30
Computer role:
```

Disk Encryption — FAIL PR.DS-01 / ISO 8.24

Checks whether BitLocker disk encryption is enabled and the percentage of the volume encrypted. An unencrypted disk means that if the physical device is lost or stolen, all data on it can be read without needing any credentials.

Raw command output:

```
BitLocker Drive Encryption: Configuration Tool version 10.0.26100  
Copyright (C) 2013 Microsoft Corporation. All rights reserved.
```

```
ERROR: An attempt to access a required resource was denied.
```

```
Check that you have administrative rights on the computer.
```

Patch / Update Status — PASS PR.PS-02 / ISO 8.8

Confirms that Windows updates are being installed on this machine by checking for recorded update history. Regular patching closes known vulnerabilities before they can be exploited.

Raw command output:

```
HotFixID InstalledOn
```

```
KB5120708 8/12/2026
```

```
KB5054156 11/26/2025
```

```
KB5121003 8/12/2026
```

```
KB5123304 8/12/2026
```

Unnecessary Services — PASS PR.PS-01 / ISO 8.9

Scans currently running Windows services for a fixed watch-list of historically risky services (Telnet, Remote Registry, FTP Server). These services, if running unnecessarily, expand the attack surface available to an attacker.

Raw command output:

```
No risky services (Telnet, Remote Registry, FTP) found running
```

Report Integrity

This report's contents are hashed using SHA-256 at the moment of generation. Any modification to the underlying JSON file after generation would produce a different hash, making tampering detectable.

SHA-256 Report Hash:

99661fd4211d92553abaf01434772105563d309cfc2788e2972460f201485f94
